

Stainless Steel Body Tray LM 80/100

The body tray serves to accommodate, to store and to transport bodies of deceased. A seamless deep-drawn, extremely rugged structure of ground stainless steel (material no. 1.4301 -ANSI 304) without welded corners and edges on the inside ensures perfect cleaning. Two closed skids at the bottom of the body tray serves for noiseless transport on the roller tracks of the lift and transport truck or on the shelf system, and prevents moreover lateral tipping. A big sliding handle is mounted at each front end of the body tray. The body tray is absolutely resistant to cleaning agents and disinfectants.
