THE STEPPER® – ELECTRIC STAIR CLIMBING SYSTEM

The Stepper® electric stair climbing system has a 375 lbs capacity and is lightweight and easily transportable. This is your second attendant. No more straining to lift the deceased up and down stairs. The Stepper® electrically climbs and descends the stairs with ease. The folding handle allows the attendant to stand upright when descending the stairs. No more back strain or injury. Easily maneuver around corners and tight spaces. Sturdy microcellular wheels smoothly glide on any surface and never need inflating.

Designed with industry standards The Stepper® is the same height as your removal cot when collapsed. When transferring, simply place The Stepper® next to your removal cot and slide the remains off the BodyGlide™ board onto your cot. The Stepper® can simply slide in next to your removal cot or it can lock into place in your removal vehicle.

WE HEARD YOU – THE STEPPER®

The number one question we are asked is, "How can you help me with home removals?" Now more than ever, funeral professionals are being asked to do more for less… less time with the family, less services, less income and less staff. This comes at a cost to their health. With the population ever increasing in size, more home deaths due to the increase in hospice care and the lack of income to hire more staff, funeral professionals are using their backs as collateral. We heard you and we answered with The Stepper®. Now there is no location in a home that a funeral professional of any gender, height or size can't access. Narrow hallways, a basement death, clutter, steep stairs, curved stairs, no room to maneuver a stretcher… none of this matters with The Stepper®. We designed The Stepper® with the same quality you'd expect from Mortuary Lift Company™. We manufacture only the highest quality, most durable, long lasting equipment because we understand that this industry is unpredictable and funeral professionals can't be left to struggle. Light enough to take on every house call, you won't leave without it.
